C1
2. (ONCE AMENDED) A method in a data processing system for printing web pages, the method comprising the data processing system implemented steps of:
receiving a request to print a web page; and
printing the web page and each web page associated with the web page;
wherein the printing step automatically and individually prints each of a plurality of web pages associated with the web page on selected levels below the web page; and wherein if a first web page of the plurality appears more than once among the plurality, said first web page is only printed once.

C2
8. (ONCE AMENDED) A method in a data processing system for printing web pages, the method comprising the data processing system implemented steps of:
responsive to an input selecting a current web page for printing, determining whether a maximum depth for printing has been reached;
identifying a set of universal resource identifiers located within the current web page in response to the maximum depth being unreached;
retrieving the web page identified by the set of uniform resource locators; and
printing each web page retrieved;
wherein each web page retrieved is represented in a hash table, and wherein if a web page appears more than once in the hash table, said web page is only printed once.

C3
16. (ONCE AMENDED) A method for printing items comprising the data processing system implemented steps of:
receiving a request to print a current item, wherein additional items are associated with the current item in relationship in which the additional items are on levels below the current item;
printing the current item;

C³

determining whether additional items on levels below the current item are to be printed; and
responsive to a determination that additional items are to be printed, printing the additional items;
wherein if a first item appears more than once among the additional items, the first item is only printed once.

C⁴

19. (ONCE AMENDED) A data processing system for printing web pages, the data processing system comprising:
receiving means for receiving a request to print a web page; and
printing means for printing the web page;
wherein the printing means automatically and individually prints each of a plurality of web pages associated with the web page on selected levels below the web page; and wherein if a first web page of the plurality appears more than once among the plurality, said first web page is only printed once.

C⁵

25. (ONCE AMENDED) A data processing system for printing web pages, the data processing system comprising:
determining means, responsive to an input selecting a current web page for printing, for determining whether a maximum depth for printing has been reached;
identifying means for identifying a set of universal resource identifiers located within the current web page in response to the maximum depth being unreached;
retrieving means for retrieving the web page identified by the set of uniform resource locators; and
printing means for printing each web page retrieved;
wherein each web page retrieved is represented in a hash table, and wherein if a web page appears more than once in the hash table, said web page is only printed once.

C⁶

33. (ONCE AMENDED) A computer program product in a computer readable medium for printing web pages, the computer program product comprising:
first instructions for receiving a request to print a web page; and
